

New Flawless End Join System Provides a Smoother, Stronger Floor

Australian Solar Timbers is pleased to announce the introduction of a new high standard in Australian hardwood tongue & groove end matching. This new system of precision end matching is an Australian first and will make flooring installation quicker and easier while producing an even stronger floor.

This world leading machining system integrates advanced engineering and state of the art technology to establish a new order of high quality end matching with zero tolerance squaring accuracy. The innovative design and technology controls within the machining operation have been built to withstand the product diversity of AST flooring products while ensuring the same precise standard is applied to each and every board.

The zero tolerance squaring accuracy of AST end matching means the laying of timber floors becomes faster with all joints easily fitting into place resulting in an almost seamless appearance with perfectly formed corners.

Since being installed earlier this year AST has progressively introduced this new high precision end matching to its Pinnacle ranges of 80 x 19mm and 130 x 19mm structural flooring and starting September will extend it to the Affinity range 85 x 14mm solid overlay flooring.

AST Pinnacle 130 x 19mm End Match
